CHIBA KENJI**(54) PHOTSENSITIVE COMPOSITION AND PATTERN FORMING METHOD USING THE SAME**

(57)Abstract:

PURPOSE: To provide a photosensitive compsn. having high sensitivity and high resolution in short-wavelength light source, not causing phase separation in the state of a film and capable of stably giving a fine resist pattern as a photosensitive compsn. suitable for use as a resist material.

CONSTITUTION: This photosensitive compsn. contains a polymer obtd. by protecting alkali-soluble groups in an alkali-soluble polymer with groups unstable to an acid, a compd. which generates the acid by exposure, at least one kind of amine compd. selected from among imidazola compds., alanine compds., adenine compds. and adenosine compds., and a phenol compd. as essential components.

## (54) CASE FOR RECORDING MEDIUM

(57)Abstract:

**PURPOSE:** To provide a case for recording medium which is excellent in operative efficiency when information recording medium is taken in or out and is prevented from dust entry.

**CONSTITUTION:** In a video cassette case 1, a case body B and a lid body C are connected together by an attaching part J in a freely opening and closing manner, a frame body 3 is formed projecting from the surface of the bottom wall of the case body B to define a cassette holding space, a peripheral wall body 5 is formed projecting from the surface of the upper wall of the lid body C and, when the case is closed, it encloses the outer peripheral surface of the corresponding frame body 3. Engaging raised parts are formed on the edge 9 of end part and both the end faces 10 of the peripheral wall body 5 and, on the corresponding inner wall of the case, engaging grooves 12 and 13 engageable with the engaging raised parts are formed. A locking rib 6 is provided on the inner surface of the forward side of the peripheral wall body 5 and a locking groove 11 is provided near the engaging groove 12 on the outer side surface of the frame body 3.
